INVITY / SOCIAL STRATEGY

What happens to your sats after you hit Buy?

Kitti Borissza

Independent application proposal for Social Media Lead

Existing artwork from The Patient Funnel

Invity already knows how to open

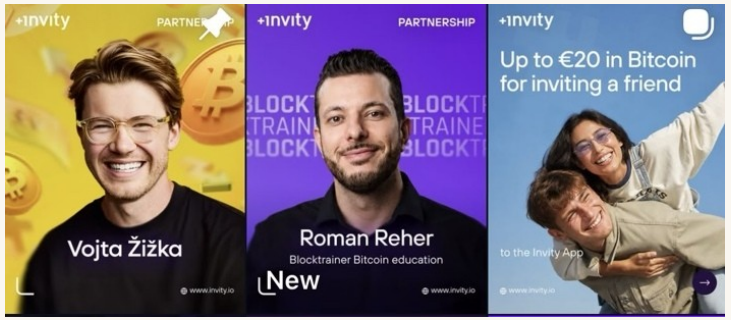

X / 31 OCT 2026

The whitepaper birthday gives an old document a new reason to be read.

X / WALLET EXPLAINER

Invity used a wallet question to explain a news story. I'd follow it with the moment a buyer can choose where their sats go.

INSTAGRAM / CREATOR POSTS

The grid puts faces to the partnerships. I'd ask a local creator to show their wallet routine on camera.

Source / Three supplied screenshots from @invity_io and @invity.io

The receipt is the story

I’d start a recurring X series called After You Buy. Each post answers one question someone could ask with their transaction open.

WHAT I’D CUT

Routine price recaps. I’d put that time into reading replies and getting the next answer right.

X / AFTER YOU BUY #01

You bought bitcoin. The app shows a balance. Who holds the keys right now?

If you’re looking at an Invity app balance, BitGo holds it in custody. If you withdraw to a wallet whose keys you control, that’s self-custody.

For the team. Which question about a first buy or withdrawal keeps reaching Support?

Auto Send, in the replies

X / PROPOSED POST

Stacking on Invity and want the sats on your own keys? Set a Bitcoin address and a threshold in Auto Send. When your eligible balance reaches it, Invity can send the sats there.

READER QUESTION / CONCEPT

“Who holds the keys before it lands in my wallet?”

BitGo holds the app balance in custody. Once the bitcoin is in a wallet whose keys you control, you’re holding it yourself.

INSTAGRAM / CAROUSEL CONCEPT

01 / COVER

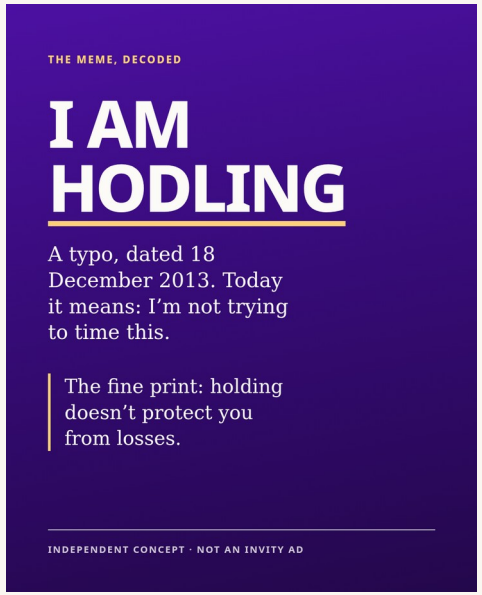

Where do your sats go next?

02 / HOW IT WORKS

Pick a wallet address.
Set a threshold.

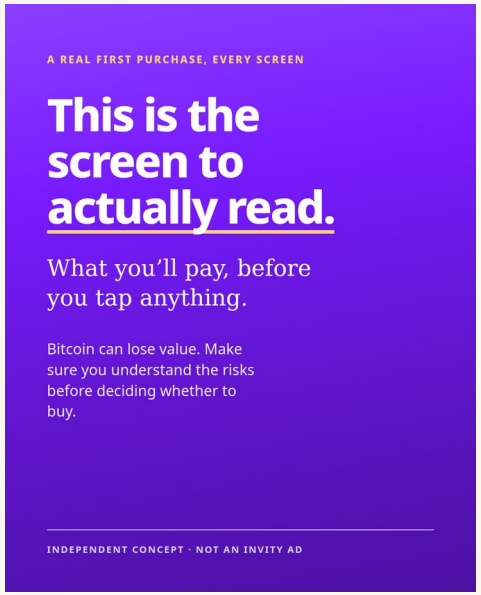

Saveable steps for someone checking their wallet setup. I’d add an approved app walkthrough on YouTube once we have the current screens.

Three pieces I’d put in the feed

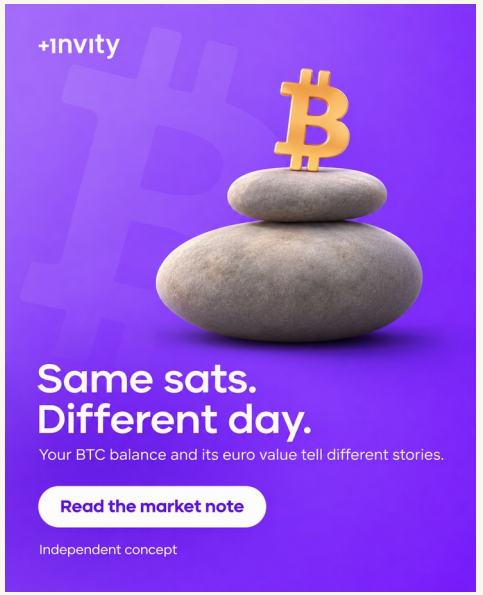

HODL / X

A typo that outlived the trade. Link the 2013 forum post.

FIRST BUY / META VIDEO

Pause on the quote screen. Let viewers see what they’d check before confirming.

SAME SATS / X

The fiat quote moved. The sat count didn’t. Link the market note.

A buyer can enter at any point

MOMENT	QUESTION	WHAT I'D PUT IN FRONT OF THEM
DISCOVER	**"Where did HODL come from?"**	X post with the original forum link.
COMPARE	**"Who holds the keys here?"**	Custody explainer with the two paths.
FIRST BUY	**"What am I about to pay?"**	Quote-screen walkthrough before confirmation.
KEEP STACKING	**"When can I move my sats?"**	Auto Send guide and app details.
JOIN IN	**"How do other people do it?"**	Creator wallet walkthrough with an X Q&A.

X gets the daily desk

X	3 originals to start. Check replies every workday and log recurring questions.
Instagram	1 saveable carousel or Reel from a question worth showing.
Facebook	Reuse the first-buy walkthrough where it fits. Start with the Meta pilot.
LinkedIn	1 useful team, partner or product-context post every two weeks.
YouTube	1 searchable walkthrough per month if approved screens and edit time are ready.

Auto Send can travel from X to Instagram. A timely reply stays on X. With local review capacity, pilot one creator walkthrough with a tracked link and clear ad disclosure if paid.

Fees first or custody first?

A / FEES

“This is the screen to actually read. What you’ll pay, before you tap anything.”

B / CUSTODY

“Where does your bitcoin go after you buy? Let’s look at who holds it.”

SETUP

€500 / 30 days on Meta, illustrative. One eligible market. Same first frame, footage, CTA and delivery.

PRIMARY SIGNAL

Share of starts that reach the end of the opener. Check fee-screen drop-off, saves and questions for context.

NEXT EDIT

Keep the stronger hook if the read is clear. If it’s noisy, review the replies and rerun before calling a winner.

Read first purchases separately when event tracking and volume support it.

What I’d hand over by day 100

01–20

Listen

Read X replies and Support themes. Map the feed, product questions and market baselines.

DECISION

Pick the first market and series.

21–40

Set up

Draft voice examples, the claims register, review rules and the first Grokbot briefs.

DECISION

Agree who can clear a post.

41–70

Pilot

Ship the series, try the opener test and brief one local creator if approvals are ready.

DECISION

Decide what earns a second run.

71–100

Expand

Write the playbook for up to six markets and set the next quarter’s budget priorities.

DECISION

Expand where local review is ready.

The desk behind the account

01 / INPUTS

Approved inputs

Voice examples, dated claims, project briefs and market profiles.

02 / GROKBOT

Research and drafts

Collect source links, group repeat questions and flag old or conflicting claims.

03 / HUMAN REVIEW

Clear the post

Social owns copy. Product checks mechanics. Local and Compliance review as needed.

04 / PUBLISH

Feed the next brief

Social publishes, handles replies and reports what people still ask.

MONDAY / COMPETITOR DIGEST

Grokbot links to new wallet posts and groups repeat custody questions. I pick one for the brief and ask Product to check the answer before it goes out.

One Auto Send brief, two local drafts

Lock the mechanics first. The user sets a destination and threshold. Product verifies what balance qualifies and how the transfer works.

GERMANY / EXAMPLE FOR X

„Wann landen die Sats in meiner eigenen Wallet?“

Test a threshold explainer. Link to the approved local help page once checked.

SPAIN / EXAMPLE FOR A CREATOR REEL

“¿Cuándo llegan los sats a tu propio monedero?”

Show address setup on approved local screens. Check disclosure before any paid boost.

Local checks availability and language. Product clears mechanics. Social holds any uncleared version, then publishes and reports. If address questions repeat, the next brief opens there.

Illustrative drafts / The role lists Czechia, Germany, Spain and Poland. Six markets are a proposal.

I can write it and run it

BITVOCATION / POW LAB	I host Bitcoin Builder Calls and made a Bitcoin Meme Quiz.
TZ CONNECT / TEZOS	I ran developer programmes and helped moderate the community Discord.
WASABI WALLET	I facilitated a multi-day communications strategy workshop with the wallet team.
TOMORROWPEOPLE	I ran paid social and worked directly with campaign tracking and reporting.

I’d love to hear which wallet question you’d put at the top of the feed.
